Dear Sirs:

I am an assistant professor in the Cardiothoracic surgery section at St. Louis University Medical Center. I am currently involved in a research project in which we investigate the physiologic consequences of pulmonary ischemia as it pertains to lung transplantation. In addition, we are hoping to find interventions to alleviate the damaging effects of this entity in hopes of improving lung preservation during transplantation.

I am writing to solicit an application for a Research Grant in order to support our research efforts. I would greatly appreciate if you could forward to me such an application and any guidelines you may have which would help me to provide a full and accurate picture of our research program.

Thank you for your time and consideration.

Sincerely,

Keith S. Naunheim, M.D.
Assistant Professor of Surgery
